

CouncilConnect: Event Management & Registration

A smarter way for student councils to manage events — from creation to confirmation — all in one connected platform.

The Problem

Students miss event updates, forget registration deadlines, and lose track of venue details — creating disengagement and low turnout.

The Solution

Committee members create events with posters, venue details, and reminders. Students browse, register, save, and receive automatic notifications.

This end-to-end workflow eliminates manual coordination and keeps every student informed in real time.

How the Event Module Works

1

Committee Creates Event

Title, description, poster, venue, and date are entered into the system.

2

Stored in Database

Event data is persisted and made available to all registered students instantly.

3

Notifications Dispatched

Push alerts are sent to students based on preferences and relevance.

4

Students Register

One-tap registration with real-time count updates and confirmation.

5

Analytics Generated

Participation data, engagement rates, and trends are logged for committee review.

Hostel Grievance Management

One of CouncilConnect's most critical features — giving every hostel resident a structured, trackable channel to raise and resolve complaints.

Common Hostel Problems

Maintenance

Water leakage, electricity failures, room repairs

Connectivity

WiFi outages and slow internet across blocks

Mess Issues

Food quality complaints and hygiene concerns

What Students Submit

- Complaint title and detailed description
- Room number for precise location
- Optional photo attachment for evidence

System Response

- Auto-categorizes by issue type
- Assigns priority level
- Tracks status: **Pending** → **In Progress** → **Resolved**

Escalation Logic: Unresolved complaints are automatically escalated to the hostel admin — no manual follow-up required.

Hostel Complaint Workflow

Submit Complaint

AI Categorize

Assign Committee

Track & Close

Faster Resolution

Automated routing cuts resolution time significantly versus manual processes.

Full Transparency

Students track complaint status in real time — no more chasing committee members.

Less Manual Work

AI categorization and auto-escalation reduce administrative burden by design.

Lost & Found Portal

A practical, AI-enhanced digital board where students can post, search, and securely connect over lost and found campus items.

What Students Commonly Lose

ID Cards & Wallets

Earbuds & Gadgets

Keys & Bags

Portal Features

- Post lost or found items with images
- Mention last-seen location on campus
- Contact finder securely within the app

AI Enhancement

- Keyword detection across all posts
- Automatic matching of similar item descriptions

"Black Skybag found near IT Building" — AI flags this as a potential match for a recently reported lost bag.

Analytics & Monitoring Dashboard

Designed for administrators and council members, the dashboard transforms raw campus activity into clear, actionable insights.

What the Dashboard Tracks

- Total complaints filed and resolved
- Event participation and registration rates
- Active student engagement over time
- Complaint categories and resolution speed

Why It Matters

Data-Driven Decisions

Admins identify recurring issues before they escalate.

Public Transparency

Students see that their grievances are being acted upon.

Smart Campus Navigation

An interactive, web-based campus map that helps every new and returning student find exactly where they need to be — including live event venues.

Locate Key Campus Spots

- Departments, labs, and classrooms
- Hostel blocks and administrative offices
- Canteen, auditorium, and event venues
- Lost item last-seen locations

Technology Stack

The map also highlights **event venues in real time** and can be integrated with the Lost & Found module to pin item locations.

Leaflet.js

Lightweight, open-source mapping library for interactive rendering

OpenStreetMap

Community-maintained map data — no licensing cost, always current

System Architecture

CouncilConnect is built on a robust, layered architecture — designed for scalability, maintainability, and intelligent automation.

Frontend

React.js with
HTML/CSS/JS for a
responsive, modern
student interface

Backend

Spring Boot powers
secure REST APIs and
business logic

Database

MySQL for reliable,
structured storage of all
campus data

AI Services

NLP categorization for
complaints and smart
event recommendations

External APIs

Leaflet Maps and push
notification services for
real-time delivery

Advantages & Future of CouncilConnect

Current Advantages

Centralized Platform

Events, grievances, navigation, and analytics — one unified system.

Real-Time Communication

Instant push updates keep students and administrators always informed.

Smart Analytics

Data-driven campus management replaces guesswork with evidence.

Future Enhancements

Mobile App

Native iOS and Android experience for on-the-go campus access

AI Chatbot

Conversational assistant for instant answers to campus queries

Face Recognition

Automated, contactless attendance tracking for events and classes

Emergency Alerts

Broadcast critical notifications campus-wide within seconds

Conclusion

Campus governance, fully digitized.

CouncilConnect transforms fragmented, manual campus communication into a cohesive digital governance ecosystem — empowering students, councils, and administrators alike.

"Our platform improves transparency, communication, engagement, and campus management through smart digital solutions."

 Events Seamless creation, registration & tracking	 Grievances Structured, transparent hostel complaint resolution
 Navigation Smart campus map with live updates	 Analytics Data-driven decisions for campus leadership
